A background image of a server room with network racks. The racks are filled with equipment, and there are several patch cables with RJ45 connectors plugged into the front panels. The lighting is somewhat dim, with a blueish tint, suggesting a professional or technical environment.

Keith Hammond

God,

I give you all the glory, honor, and praise for all that you have done in, to, and through, my life.

Thank you for Jesus Christ and the Holy Spirit.

To my wife, in this 28th year together, thank you for all your prayers.

To my daughters, my love for you goes beyond words. Many blessings to you both.

To my grandsons, it is a great joy to be Blessed with your unconditional love.

WHAT IS A COMPUTER NETWORK?

A computer network is a group of two or more computers linked together at a common point. Other devices can be connected to the network such as printers, servers, back-up modules, copiers, etc. The network allows the users of computers to communicate with each other for the purpose of sharing information and other resources such as files and folders, images, music, etc. The first computer network in the world was created by the Advanced Research Project Agency who design designed the Advanced Research Project Agency Network (ARPANET). It was designed for the U.S. Department of Defense in the late 1960's. Computer networks can be as simple as two computers connected to each other via a cable inside your house or, many tens of thousands of computers for each of your employees working in different places around the globe. These days, computer users are leaning more toward having their computer networks operate via wireless connections rather than hard-wired connections, which we'll learn more about in the Wireless Network section.

USES OF A COMPUTER NETWORK?

In today's society, computer networks are used for tasks such as running a business, maintaining data, hosting web sites, providing access to the Internet, sharing files, sending and receiving email, and a host of other uses. Some of the most popular uses of computer networks today include:

YouTube

A computer network that enables users to share their video with the world.

Twitter

A computer network that enables users to share their texts real-time.

Blogspace

A computer network that enables users to comment on topics real-time.

FaceBook

A computer network that hosts users social interaction pages for free.

LimeWire

A computer network that encourages open file sharing such as music.

Brother Keith Hammond

ABOUT THE AUTHOR:

Brother Keith is a born again Christian. He is a Spirit-led man of God, teacher and author. His life has been transformed from things such as pride and prison to passion and purpose.

God is the author of the Bible. It is meant to be our instruction manual, our roadmap home. Without it, we are lost. Use the information in these books to help you and others.

God destroys the darkness behind us, to direct us toward our destiny ahead. So whatever you do on your journey, never turn back. God bless you in your walk with Christ. Amen.
